

Wildflower seed sowing information

Contains:

A mix of 10 native UK species of wildflowers beneficial to bees, butterflies and other insects.
Field Scabious, Common Knapweed, Lady's Bedstraw, Bird's Foot Trefoil, Oxeye Daisy, Yarrow, Alsike
Clover, Lucerne, Red Clover, Black Medick

Sowing time:

Can be sown at any time when the risk of frost has gone.
Best sown from early March to mid-May or from early to mid-September.

Instructions:

Sprinkle the seed mix very thinly onto a well prepared weed-free seedbed.
After sowing, the seed should be lightly raked in with a spring-tined rake.
Firm the soil with feet or a roller.
Water thoroughly with a fine sprayed hose or watering can.
Keep area well watered until seedlings are established.
